

CORONIS terminals

intralot

lasting value

The CORONIS product line enables Lottery Organizations to boost their retailer performance today, while ensuring that their investment will continue to serve their future business needs and help create new opportunities throughout each CORONIS product life cycle.

CORONIS terminals and peripherals provide retailers of all sizes solutions that can improve efficiency, increase sales and reduce costs.

powerful impact

 CORONIS HEE (High End Enhanced)

One of the most powerful high-impact Lottery terminals and the first of its kind to offer total modularity and system openness.

In designing and building the CORONIS HEE, the line's top model, INTRALOT took into account all retail trends and requirements, creating a POS solution based on open standards that offers excellent performance today while creating significant "headroom" for future store technology advances.

The CORONIS HEE provides maximum flexibility and investment protection. With selectable and upgradeable connectivity options, and a variety of CORONIS peripherals –including printers, customer displays, coupon readers, CCD barcode scanners, player advertisement displays and TV screens–the CORONIS HEE can be configured with numerous options enabling Game Operators to scale up or down as their requirements change.

CORONIS HEE represents a major move forward in performance, flexibility and scalability. It can be utilized as a key integration point for retailer POS serving, as a multi-functional hub for both Lottery and Video Lottery applications and as a VLT site controller.

size matters

 microLOT

With its unique balance of size, style, performance and reliability, the innovative microLOT redefines point of sale sophistication. This new terminal, designed and produced by INTRALOT, features a space saving footprint and a sleek look, allowing Lottery Organizations to "play the game at any POS".

microLOT can best serve the need for a low volume terminal and instant ticket validation. It is the perfect solution for limited space retail outlets, such as groceries, gas stations, etc. At the same time, it is PC-based and has the processing power and speed to also accommodate the need for a full function terminal.

The basic configuration consists of 8-inch operator touch screen display, high speed 82.5 mm thermal printer, 2D barcode scanner, smart card reader and a variety of I/O ports and expansions. Coupon readers for different coupon sizes and customer displays are also available for external connection.

dynamic experience

 CORONIS MP (Multipurpose)

CORONIS MP is the perfect multipurpose self service gaming solution for retail and other off-site locations, where transaction volumes demand very efficient operations.

Its small footprint, unique modular design and minimal infrastructure requirements enable fast deployment and ease of service, while its value added service features maximize revenue opportunities.

A fresh and distinctive appearance attracts players, while its open architecture can be easily integrated into any Game Operator business model.

CORONIS MP can be equipped with a number of I/O modules –coin and note validators smart card reader, barcode scanner, printer, change giver, etc.– to accommodate any Lottery and Videolottery requirement across multiple retail formats. The double screen offers players a more personalized, "dynamic gaming experience", with games, information and options available in real time.

instant info

 CORONIS TC (Ticket Checker)

CORONIS TC is a player activated terminal for lottery and instant ticket checking that employs the most advanced barcode reading technology. A graphic display and optional player keys offer players a variety of information updates.

CORONIS TC is ideal for high volume locations, particularly during rush hours, since it reduces the workload of POS employees as well as the time players spend in queues waiting to check their tickets.

The CORONIS TC to CORONIS HEE or any other main terminal interface can be wired or wireless.

tailor made

 software and applications

Focusing on Lottery Organization needs and objectives, INTRALOT tailors the terminal software and applications that complement the CORONIS hardware portfolio to deliver a complete tailor made solution.

Based on reliable, tried and tested software technology, INTRALOT delivers best value for Game Operator investments. Web applications, banking, ticketing, billing and loyalty schemes are all available from the CORONIS family of terminals.

Gas station

Grocery

mega store

The new era in gaming requires well organized POS environments with many terminals for different operations, including retailer terminals, unattended terminals, "check your ticket" terminals, advertisement displays and multiple TV screens for displaying rich gaming content. The CORONIS product line offers fully integrated end-to-end solutions, meeting all Game Operator requirements for organizing the mega retail stores of the future.
