

PRESS RELEASE

Maryland Lottery and Gaming Commission Selects Intralot for Lottery System Contract

July 17, 2025

Intralot S.A. informs the investor community and its stakeholders that on July 15, 2025 the Maryland Lottery and Gaming Control Commission approved the recommendation to award a new Lottery Central Monitoring and Control System (LCMCS) contract to its US subsidiary, Intralot, Inc. following a competitive bidding process.

The vendor awarded the contract will manufacture the counter terminals and self-service vending machines that sell tickets at 4,300 Maryland Lottery retailer points of sale; develops the software that runs the system's sales and accounting functions; and provide numerous related services that are necessary to operate the Maryland Lottery. The term of the contract is 10 years with a possible 5+1 year extension.

As part its proposal to the State, Intralot has engaged nine local business enterprises (MBE) to service the Maryland Lottery contract. Historically, vendors have used fewer MBE partners, but Intralot believes its new approach will create far greater opportunities for local communities.

Intralot's financial proposal corresponds to a total estimated contract term price of \$260,393,946.

The Gaming Control Commission's approval is an intermediary step in the award process for approving any future contract.
